- Cmd-V

Connecting to the Amherst Unix
- System Preferences
  - Click Network
  - Connect to the Amherst College VPN
- Finder application
  - Click Go in the menu
  - Choose server
  - Click Connect

- Original setup
  - If necessary, enter the server address: smb://unix-mac.amherst.edu/
  - If necessary, enter username and password

  - Click Connect

Connecting Java App to Amherst Unix Directory
- Finder application
  - After connecting to the Unix (see above), click on unix-mac.amherst.edu
  - Click on fwesthoff
  - Then, click to the directory you want.
- The directory specification to use in Java is /Volumes/fwesthoff/ followed by the path the desired directory

- For example, suppose you want to connect to the public_html/MicroEconLab/. The directory to specify in the Java app is: \: /Volumes/fwesthoff/public_html/MicroEconLab/

Jar Access to Disk Files
- System Preferences -> Security & Privacy -> Full Disk Access
- Click padlock to unlock and click "+" to add the Java launcher
- Navigate to /System/Library/CoreServices/JavaLauncher.app
- Check the box and click padlock again to lock

Documents Backup
- In Finder: Select Documents in the Favorites (left) window
- In Finder's menu select: File → Burn to Disc … (not New Burn Folder)
- A new window appears prompting you to insert a blank disc
- After inserting a disc another new window appears allowing you to name the disc
- Click Burn in the second window
- Writing (~10 minutes) and then verifying (~7 minutes) now occurs
- After this is complete, Eset scans the disc which can be aborted by clicking Quit
